The “Reading the Mind in the Eyes” test
(Eyes test) is an advanced test of theory of mind. Typical sex difference has been reported (i.e., female advantage). Individuals with autism show more difficulty than do typically developing individuals, yet it remains unclear how this is modulated by sex, as females with autism have been underrepresented.
My mind's eye is blind – so what's going on in my brain? Dustin Grinnell can't think in pictures – but people like him are teaching us a lot about how our brains process the things we see.
The Mind's Eye - 1st Edition

The Mind-Eye Institute is an optometry practice with an emphasis on neuro-optometric rehabilitation that provides world-class care by measuring the eye as well as how the brain processes its visual inputs. Each person’s unique reactions and responses to lens changes are measured with state-of-the-art
The chapter proposes a theory in which eye behavior is controlled in a much less cognitive manner through an automatic system of activation and inhibition within the saccadic system. The chapter
explains the three ways in which cognition, which is known to affect eye behavior, exerts its influence in such a system.
